http://www.w3schools.com/sql/sql_functions.asp

APARTADO 1: CREACIÓN DE TABLAS

1.- Codifica un fichero .sql para crear la **BDAlumnos** compuesta de las siguientes tablas:

DROP DATABASE IF EXISTS BDAlumnos;

CREATE DATABASE IF NOT EXISTS BDAlumnos;

USE BDAlumnos;

• idAlumno: entero, autoincrementado, obligatorio

• NOMBRE: Cadena(20) obligatorio

• APELLIDOS: Cadena(20) obligatorio

Utiliza:

- ✓ Constraint para la clave primaria que es idAlumno llamado pk_alumnos
- ✓ Un motor de BD innodb en la creación.

```
CREATE TABLE `alumnos` (
    `id_alumno` int auto_increment NOT NULL,
    `nombre` varchar(20) NOT NULL,
    `apellidos` varchar(20) NOT NULL,
    CONSTRAINT PK_ALUMNOS PRIMARY KEY (`id_alumno`)
) ENGINE=InnoDB DEFAULT CHARSET=latin1;
```

- **Yes** Crea una tabla **ciclos**, con los siguientes campos:
- id_ciclo: entero, obligatorio, autoincrementado
- abreviatura : cadena(5), no se repite
- nombre : cadena (100)

Utiliza:

- ✓ Constraint para la clave primaria que es idCiclo
- ✓ ENGINE=InnoDB

```
CREATE TABLE 'ciclos' (
    'id_ciclo' int(11) auto_increment NOT NULL,
    'abreviatura' varchar(5) UNIQUE,
    'nombre' varchar(100),
    CONSTRAINT PK_CICLOS PRIMARY KEY ('id_ciclo')
) ENGINE=InnoDB;
```

- id_modulo: entero, autoincrementado, obligatorio
- id_ciclo: entero, obligatorio
- curso: entero, obligatorio
- nombre : cadena (100) obligatoria

Utiliza:

- ✓ Constraint para la clave primaria que es id_modulo, id_ciclo
- ✓ Un motor de BD innodb en la creación.
- ✓ CONSTRAINT 'fk_ciclo_modulo' para la clave ajena id_ciclo
- ✓ ENGINE=InnoDB

```
CREATE TABLE `modulos` (

`id_modulo` int auto_increment NOT NULL,

`id_ciclo` int NOT NULL,

`curso` int NOT NULL,

`nombre` varchar(100) NOT NULL,

CONSTRAINT PK_MODULOS PRIMARY KEY (`id_modulo`,`id_ciclo`),
```

```
CONSTRAINT `fk_ciclo_modulos` FOREIGN KEY (`id_ciclo`) REFERENCES `ciclos` (`id_ciclo`)
) ENGINE=InnoDB;
```

- Crea una tabla alumnoModulo con los siguientes campos:
- idAlumno entero obligatorio,
- idModulo obligatorio,
- idCiclo entero obligatorio,
- notaFinal numérico con un decimal

Utiliza:

- ✓ Constraint para la clave primaria que es idAlumno, idModulo
- ✓ Constraint para la clave ajena idAlumno
- ✓ Constraint para la clave ajena idCiclo
- ✓ ENGINE=InnoDB

```
CREATE TABLE `alumnomodulo` (
   `idalumno` int NOT NULL,
   `idmodulo` int NOT NULL,
   `idciclo` int NOT NULL,
   `inotafinal` numeric(3,1),
   CONSTRAINT PK_ALUMNOMODULO PRIMARY KEY (`idalumno`, `idmodulo`),
   CONSTRAINT fk_alumno_alumnoModulo FOREIGN KEY (`idalumno`) REFERENCES `alumnos`
   (`id_alumno`),
   CONSTRAINT fk_ciclo_alumnoModulo FOREIGN KEY (`idmodulo`, `idciclo`) REFERENCES `modulos`
   (`id_modulo`, `id_ciclo`)
   ) ENGINE=InnoDB;
```

- **\(\)** Crea una tabla **profesor**, con los siguientes campos:
- ID_PROFESOR: entero, obligatorio, autoincrementado
- NOMBRE cadena(30)
- APELLIDOS cadena(50)

Utiliza:

- ✓ Constraint para la clave primaria que es id_Profesor
- ✓ ENGINE=InnoDB

- Crea una tabla profesoresModulos, con los siguientes campos:
- ID_PROFESOR : entero, obligatorioID MODULO : entero, obligatorio
- ID_CICLO: entero, obligatorio

Utiliza:

- ✓ Constraint para la clave primaria que es id Profesor, id modulo, id ciclo
- ✓ ENGINE=InnoDB

```
CREATE TABLE `profesoresmodulos` (
    `ID_PROFESOR` int(11) NOT NULL,
    `ID_MODULO` int(11) NOT NULL,
    `ID_CICLO` int(11) NOT NULL,
    CONSTRAINT PK_PROFESORESMODULOS PRIMARY KEY (`ID_PROFESOR`, `ID_MODULO`, `ID_CICLO`),
    CONSTRAINT `fk_ciclo_profesoresmodulos` FOREIGN KEY (`ID_CICLO`) REFERENCES `ciclos` (`id_ciclo`),
    CONSTRAINT `fk_profesor_profesoresmodulos` FOREIGN KEY (`ID_PROFESOR`) REFERENCES
    `profesores` (`ID_PROFESOR`),
    CONSTRAINT `fk_modulo_profesoresmodulos` FOREIGN KEY (`ID_MODULO`) REFERENCES
    `modulos` (`id_modulo`)
) ENGINE=InnoDB DEFAULT CHARSET=latin1;
```

NOTA:

- Observad si el nombre de los campos de la tabla alumnomodulo coincide con las soluciones de las consultas, de no ser así cambiar los nombres de campos en dicha tabla.
- Observad si están definidas todas las claves ajenas, de no ser así incluirlas desde la línea de comandos y finalmente realizar una copia de seguridad de la base de datos.
- Inserta al menos dos registros en cada tabla.

INSERT INTO 'alumnos' VALUES

APARTADO 2: CONSULTAS (Grupo I)

 Muestra el texto "Bienvenido a SQL" y la fecha actual (current_date()) con el comando SELECT

select "bienvenido a sql, hoy es ", current_date();

2.- Muestra con select tu edad de forma que calcule la diferencia de las fechas actuales current_date() y la fecha de tu nacimiento. La diferencia se halla con la función datediff y devuelve días.

SELECT ROUND(DATEDIFF(CURRENT_DATE(),'1981-2-6')/365);

3.- Muestra el nombre y apellidos de los alumnos

select nombre, apellidos from alumnos;

4.- Muestra el nombre y apellidos de los alumnos usando para la tabla alumnos el alias a

select a.nombre, a.apellidos from alumno a;

5.- Muestra el id_alumno con el alias "matricula", el nombre y apellidos de los alumnos

select id_alumno "matricula", nombre, apellidos from alumno;

6.- Muestra el id_alumno sumandole 100, el nombre y apellidos de los alumnos

select id_alumno +100, nombre, apellidos from alumno;

7.- Muestra el id_alumno, el nombre y apellidos de los alumnos en mayúsculas

select id_alumno, upper(nombre), ucase(apellidos) from alumno;

8.- Muestra el id_alumno, el nombre y apellidos de los alumnos en mayúsculas ordenados por apellidos

select id_alumno, upper(nombre), upper(apellidos) from alumno order by apellidos;

9.- Muestra el id_alumno, el nombre y apellidos de los alumnos en mayúsculas ordenados por apellidos descendentemente

select id_alumno, upper(nombre), upper(apellidos) from alumno order by apellidos desc;

10.- Muestra el id_alumno, el nombre y apellidos de los alumnos en mayúsculas ordenados por apellidos descendentemente usando número de campo en lugar de nombre

select id_alumno, upper(nombre), upper(apellidos) from alumno order by 2 desc;

11.-Muestra los dos primeros alumnos usando limit

select id_alumno, upper(nombre), upper(apellidos) from alumno limit 2;

select id_alumno, upper(nombre), upper(apellidos) from alumno limit 0,2;

12.- Muestra los alumnos 3 y 4 usando limit

select id_alumno, upper(nombre), upper(apellidos) from alumno limit 2,2;

13.- Muestra el último alumno con limit

select id_alumno, upper(nombre), upper(apellidos) from alumno order by id_alumno desc limit 0,1;

14.- Muestra los dos últimos alumnos con limit

select id_alumno, upper(nombre), upper(apellidos) from alumno order by id_alumno desc limit 0,2;

15.- Muestra los nombres de los módulos sin que se repitan usando DISTINCT

select DISTINCT nombre from modulo;

16.- Muestra el número de módulos existentes

select count(*) from modulo;

select count(id_modulo) from modulo;

17.- Muestre al número de módulos DISTINTOS en cuanto nombre

select count(DISTINCT nombre) from modulo;

18.- Muestra la media de notas obtenidas por todos los alumnos en todos los módulos (tabla alumnomodulo)

select avg(nota_final) from alumnomodulo;

19.- Muestra la máxima nota obtenida por todos los alumnos en todos los módulos (tabla alumnomodulo)

select max(nota_final) from alumnomodulo;

20.- Muestra la mínima nota obtenida por todos los alumnos en todos los módulos (tabla alumnomodulo)

select min(nota_final) from alumnomodulo;

21.- Muestra la suma de notas obtenidas por todos los alumnos en todos los modulos (tabla alumnomodulo)

select sum(nota_final) from alumnomodulo;

22.- Muestra las cuatro primeras letras del nombre de los modulos.

select mid(nombre,1,4) from modulo;

23.- Muestra las siglas de los nombres y apellidos de los alumnos

select mid(nombre,1,1), mid(apellidos,1,1) from alumno;

select concat(mid(nombre,1,1),".", mid(apellidos,1,1)) "siglas" from alumno;

24.- Muestra los apellidos y su longitud de los alumnos

select apellidos, length(apellidos) "longitud apellidos" from alumno;

25.- Muestra el id_alumno, id_modulo y su nota final dividida entre 5 y redondeada

select id_alumno, id_modulo, round(nota_final/5) from alumnomodulo;

26.- Muestra la fecha actual

select now();

27.- Muestra el año de la fecha actual

Select year(now());

28.- Mostrar el alumno con id_alumno 33

select * from alumnos where id alumno=33;

29.- Mostrar los módulos del ciclo con id ciclo 1

select nombre from ciclos where id_ciclo=1;

30.- Mostrar los módulos del ciclo con id_ciclo 1 o id_ciclo 3

select nombre from ciclos where id_ciclo=1 or id_ciclo=3; select nombre from ciclos where id_ciclo IN (1,3); 31.- Mostrar los módulos del ciclo con id_ciclo 1 e id_modulo menor que 10 select c.nombre , m.nombre from modulos m, ciclos c where m.id ciclo=c.id ciclo and c.id_ciclo=1 and m.id_modulo <3;</pre> 32.- Mostrar los módulos del ciclo con id ciclo 1 e id modulo menor que 10 y mayor que 3 select m.nombre from modulos m, ciclos c where m.id ciclo=c.id ciclo and c.id ciclo=1 and m.id modulo <10 and m.id modulo>3; 33.- Mostrar los módulos cuyo nombre empieza por P select nombre from modulos where nombre like 'P%'; 34.- Mostrar los módulos cuyo nombre termina en A select nombre from modulos where nombre like '%A'; 35.- Mostrar los módulos cuyo nombre contiene una D select nombre from modulos where nombre like '%D%'; 36.- Mostrar los módulos cuyo nombre empieza por P y contiene una O select nombre from modulos where nombre like 'P%O%'; 37.- Mostrar los módulos con más de una palabra (contienen espacio) select nombre from modulos where nombre like '% %'; 38.- Mostrar los módulos que no tienen la letra A select nombre from modulos where nombre not like '%A%'; 39.- Mostrar los módulos que empiezan por una letra cualquiera, y luego dos CC select nombre from modulos where nombre like 'CC%'; 40.- Mostrar los módulos que en la tercera letra tienen una O select nombre from modulos where nombre like '_

41.- Mostrar los módulos que en la penúltima letra tienen una O

select nombre from modulos where nombre like '%O_';

42.- Mostrar los nombres de los módulos 3, 12 y 7

select nombre from modulos where id_modulo IN (3,12,7);

43.- Mostrar los nombres de los módulos que no son 3, 12 y 7

select nombre from modulos where id_modulo NOT IN (3,12,7);

44.- Mostrar los nombres de los módulos entre el 3 y el 12

select nombre from modulos where id_modulo BETWEEN 3 AND 12;

select nombre from modulos where id_modulo >= 3 AND id_modulo <= 12;

45.- Mostrar los nombres de los módulos que no están entre el 3 y el 12 usando between

select nombre from modulos where id_modulo NOT BETWEEN 3 AND 12;
